Chapter 1 Backend Data Registration

Updated December 2024

Chapter 1 、 Backend Data Registration

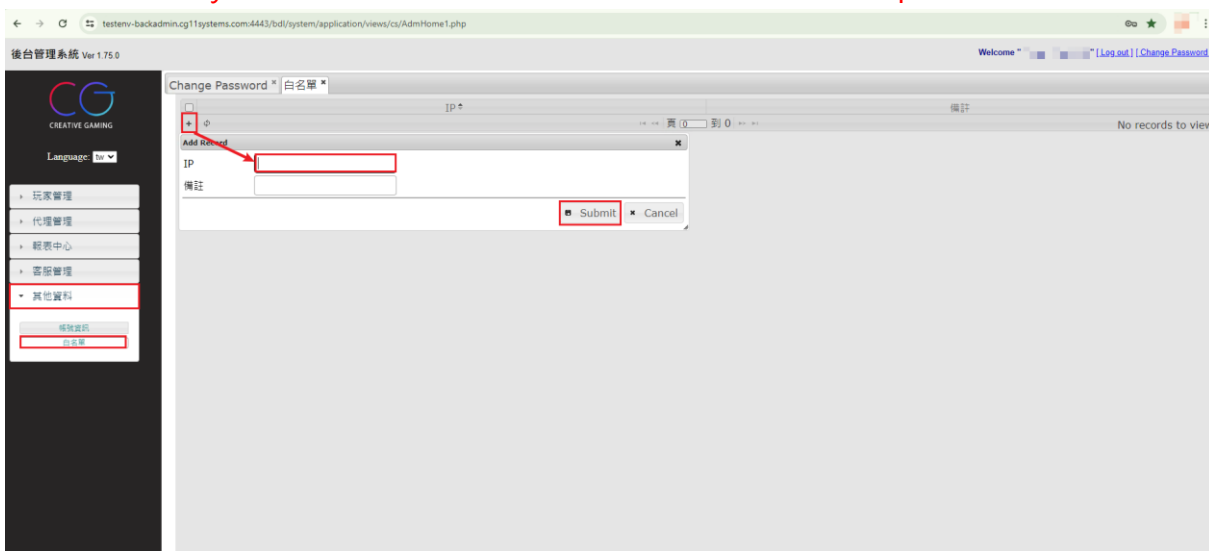

一 、 Login Backend

1. Login Backend: <https://testenv-backadmin.cg11systems.com:4443/cg/system/application/views/cs/login.php>

2. Add to whitelist:

Please notify the customer service team to assist with setup

3. URL for login verification:

Please notify the customer service team to assist with setup

ChannelID	Key	IV	MaxTransactionAmount	GetLoginAccountUrl	LoginResponseUrl	TransactionApiUrl	Wtoken	NotifyPlayerLeaveUrl	Timezone
91436	f9RksYHUOV01Fil...	BSH+Yta2Mz/3BA...	1,000,000						UTC +8

Edit Record
MaxTransactionAmount: 1000000
GetLoginAccountUrl:
LoginResponseUrl:
TransactionApiUrl:
Wtoken:
NotifyPlayerLeaveUrl:
Timezone: UTC +8

Example of login verification URL: <https://www.cg.login.token.com>

This URL function: When the player requests to log in CG, the CG will turn to this URL and request the player's identity, and will accept the player's login after no error.

This url needs to be made by yourself, and CG will call it. The purpose is to transfer the control of the player login to the platform API for verification and processing.

Connect to a seamless (single) wallet, both TransactionApiUrl and Wtoken need to be set.
